

Fernandes Ariadi Simanjuntak

nandessimanjuntak1803@gmail.com | West Jakarta, DKI Jakarta

Summary

I am a software engineer who focused on full stack, using the various stacks mentioned in the skills section. However, I'm not limited to that pile and open to learning new stacks and taking on new challenges.

Skills

PHP, Laravel, Java, Javascript, Node.js, Golang, PostgreSQL, Redis, Elasticsearch, Apache Kafka, Apache Flink, Protocol Buffer, gRPC.

Experience

Software Engineer | 08/2024 – 05/2026 | PT. Tiki Jalur Nugraha Ekakurir (JNE) | West Jakarta, Jakarta

1. Upgrade Laravel framework from version 6.x to version 12.x.
2. Designed and developed robust RESTful APIs using Laravel , ensuring scalability, security, and high performance for seamless application integration.
3. Engineered an event-driven architecture by implementing an event store with Apache Kafka and Protocol Buffers , enabling efficient data serialization and real-time event processing.
4. Built an ETL (Extract, Transform, Load) application using Java, Apache Kafka, and Apache Flink , optimizing data transformation pipelines and storing processed data into an OLAP database for real-time reporting and analytics.
5. Developed a middleware system to facilitate seamless data integration between legacy systems and new platforms, ensuring smooth parallel operation during system migration.
6. Implemented comprehensive unit and integration testing to ensure code reliability, maintainability, and adherence to quality standards.

Software Engineer (Freelance) | 09/2024 – 11/2025 | South Jakarta, Jakarta

PT. Vixpro Digital Teknologi | 04/2025 – 11/2025

1. Architected a multi-tier backoffice payment gateway connecting members, merchants, and the platform, with automated fee distribution and cascading commission logic for every deposit transaction.
2. Integrated a blockchain payment gateway (CAMP Investment Technologies) for wallet provisioning and on-chain transaction lifecycle management, backed by webhook-driven reconciliation to keep on-chain and internal records consistent.
3. Built an automated monthly reconciliation engine and pooled balance management system, ensuring idempotent, fault-tolerant transaction processing and auditor-ready reporting.

PT. Klik Digital Sinergi | 09/2024 – 01/2025

1. Built a Points Management API ecosystem for Telkomsel agents, including a multi-level referral architecture with automated commission distribution across upline/downline networks.
2. Integrated a LinkAja e-wallet pipeline for point-to-fiat conversion, achieving a 99.8% redemption success rate through exponential backoff retry mechanisms.
3. Optimized database schema and indexing for audit logging, and implemented fault-tolerant transaction handling to maintain data consistency across distributed systems.

Software Engineer | 10/2022 – 08/2024 | PT. Global Putera Asia | South Jakarta, Jakarta

1. Designed and built a comprehensive Inventory Management System featuring master data management (products, vendors, brands, pricing), real-time stock tracking, and cycle count workflows.
2. Developed HHT (Handheld Terminal) mobile application enabling warehouse staff to perform efficient stock opname via barcode scanning, syncing offline/online data to central inventory.

3. Engineered a high-throughput POS system handling cashier transactions, payment processing, and real-time inventory deduction with offline resilience for unstable retail environments.
4. Implemented Finance Module supporting fixed asset depreciation schedules, automated journal entries, and GL ledger reporting.
5. Optimized complex SQL queries and database indexing for large transaction datasets.
6. Mentored junior software engineers through code reviews, architecture discussions, and hands-on pairing—accelerating their delivery of production-ready features.
7. Collaborated directly with business stakeholders to translate retail workflows (receiving, replenishment, cashiering, financial closing) into intuitive system designs.

Information Technology | 06/2019 – 09/2022 | PT. Gelael Supermarket | South Jakarta, Jakarta

1. Designed and developed a comprehensive membership web application enabling seamless customer registration and account management.
2. Implemented full-stack features including member portal for real-time points tracking, transaction history viewing, and personalized account dashboards.
3. Served as technical connection between development vendor and management team, providing weekly progress reports and milestone updates.
4. Led successful implementation across multiple branches, training staff members on system usage and troubleshooting procedures.
5. Established comprehensive documentation system for tracking user feedback, bug reports, and feature requests.
6. Coordinate with development team to prioritize and resolve technical issues.

Education

Sekolah Tinggi Manajemen Informatika dan Komputer Jakarta STI&k
Sistem Informasi – GPA 3.12

Languages

Indonesia, English
